

GUV Series USB Personal Collaboration Devices

Ideal for Any Remote Worker

Everything a Remote Worker Needs

HD USB Headsets and 1080P Webcam

As remote work increases, many businesses have adopted cloud- or web-based UC platforms. These platforms, including Microsoft Teams, Google, Slack, Zoom, Grandstream's IPVideoTalk service and Wave app, require remote workers to simply plug a USB headset and/or webcam into a laptop. Their laptop then becomes their desk phone, web meeting platform, video conferencing solution and messaging app. The GUV series offer easy-to-use yet powerful USB headsets and webcams compatible with any collaboration platform, computer and laptop - ideal for remote workers. Many organizations are providing remote workers, staff, students and teachers with all of the devices they will need to effectively work and attend class from home. Headsets and webcams are the most useful devices for remote work, and therefore make up the core of an effective work-from-home bundle.
