

# Scenic Area Solution

By integrating intercom, emergency assistance, emergency broadcasting and management system, the solution can be applied to scenic areas. It realizes the intelligent operation and management of scenic areas, ensuring the safety of tourists and saving labor costs.

When tourists need to consult routes and rest stations, they can communicate with control center via the intercom installed nearby. The control center can monitor and locate the tourists for emergencies, providing real-time assistance. The intercom can broadcast introduction and program of scenic areas regularly.

## POWERFUL FUNCTIONS

### Intercom

Multi-party intercom can be realized between the control center, office, guards and public areas by one-click call.

### Video Linkage

The image of connected IP camera can be displayed during the intercom call.

### External Call

Input common contact information on the console, and call the selected contact quickly on the touch screen.

### Emergency Consultation (Meeting Mode)

Other parties like guards or staff can be invited to participate in the multi-party consultation for better communication.

### Alarm

Emergency alarm and video linkage will be triggered once the intercom is pressed.

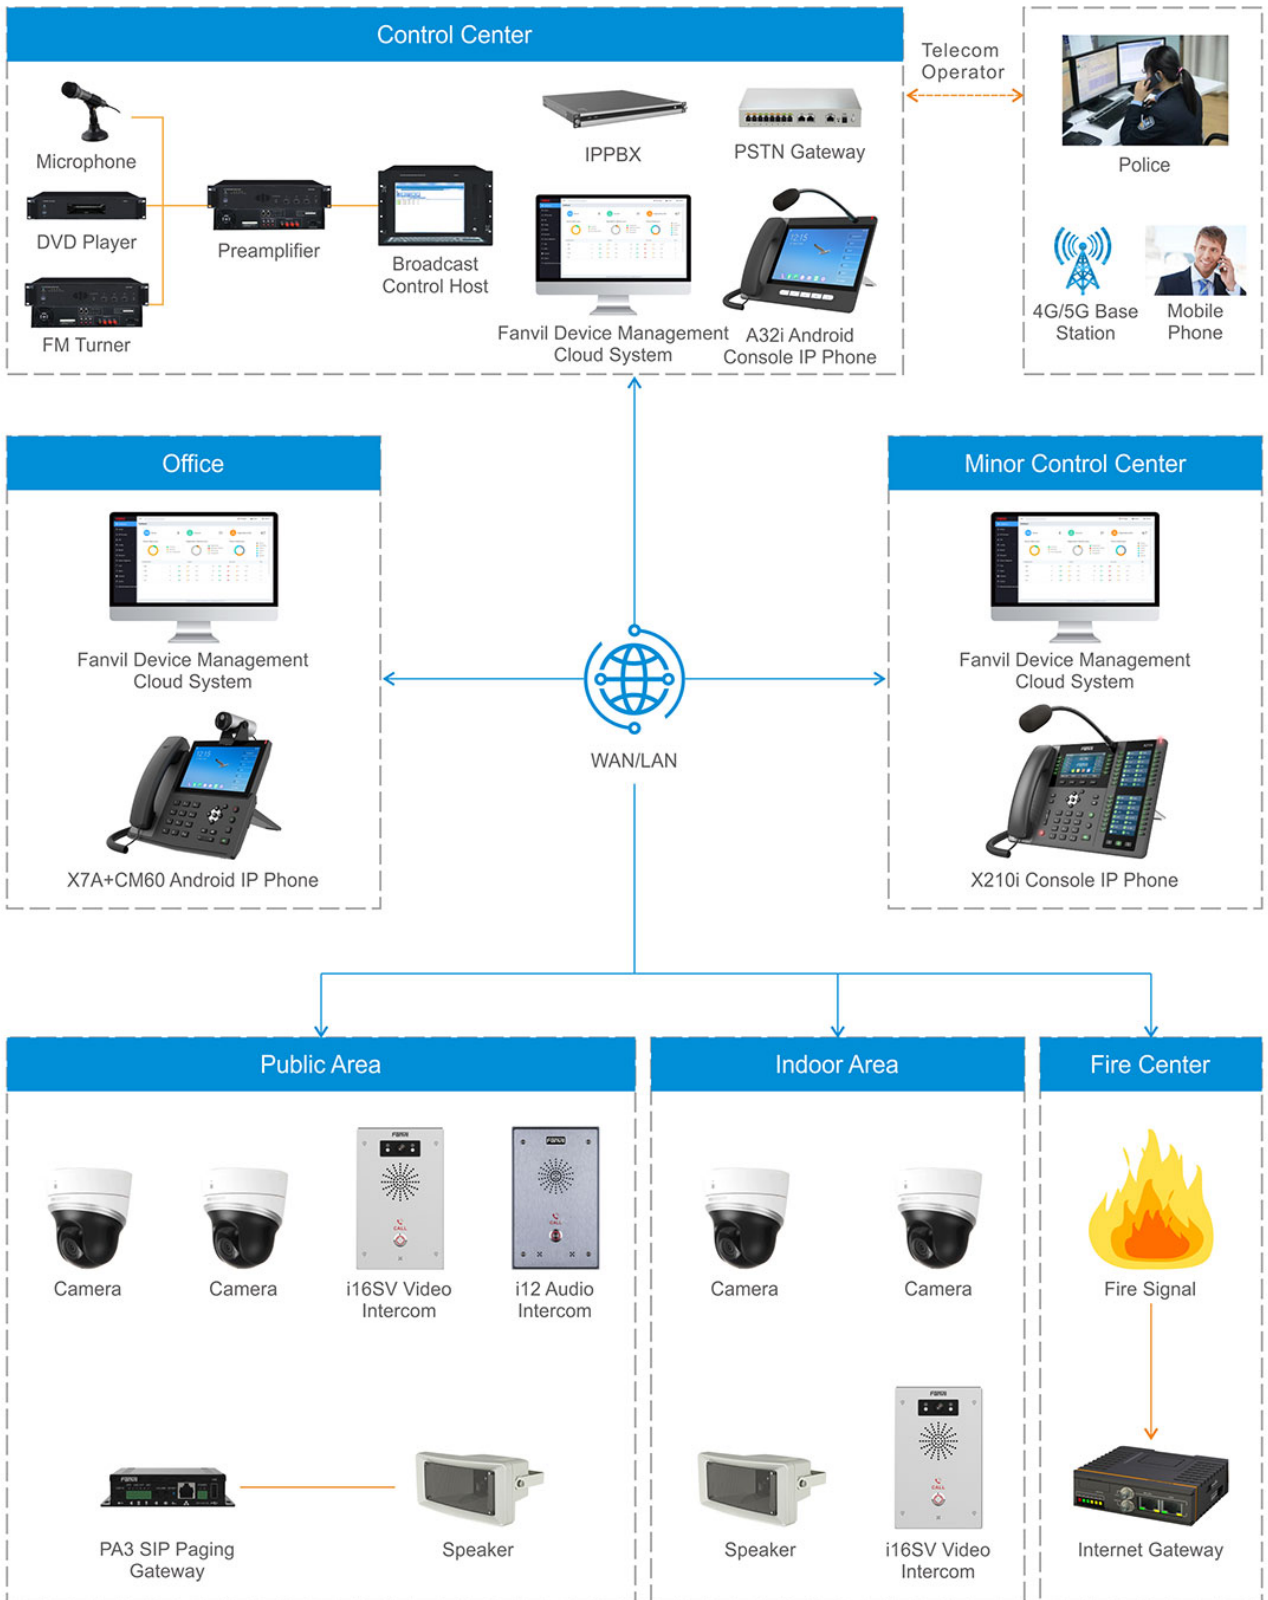

### Broadcast

Call broadcast, emergency broadcast and real-time broadcast.

# DIAGRAM

The diagram below illustrates how this solution effectively integrates the console IP phone, intercom and access control for scenic areas.
